Free Radio Offers:

RNI JINGLE

The RNI - Radio Nordsee International -Jingle single, containing 40 RNI Jingles and Promos, on this high quality 7" Disc.

PRICE £1.25

Ideal for deejay use, whether Disco or Radio, contains over 40 of your favorite jingles.

- "All the Deejays say, This one's on its way"
- "Number 1", "And the beat goes on....."
- "Remember this golden classic",

PRICE £1. 25 Sin.Disc £2. 00 Cass. Post free

All Time Favourite Jingles Radio Caroline Mi Amigo Jingles

£1. 25

The Radio Caroline and Radio Mi Amigo Jingle single, containing 40 Jingles from both stations on this high quality 7" Disc.

PRICE

Post free

'Ham' in court accused of running a pirate radio

ANTHONY COLLIS'S interest in radio equipment cost him more than he bargained for. For when he traced a pirate radio station to a house and went to look round, it was raided by post office men and police. And last week his "interest" landed him in Epsom Magistrates' Court.

Collis, of Yarm Court Catford was deferred for a Road, Leatherhead, month for social reports. pleaded not guilty to running the radio station.

Tracked

Nicholas Catford, from Sutton, denied three charges of running the station.

The magistrates found both men guilty. Chairman Mr Gerald Knight told Collis:

Brig R. C. Halse. prosecuting for the Home Office, said that within 48 hours of "Radio London Stereo" going on the air on Easter Monday Post Office officials had tracked it down to a house near Sutton.

Brig R. C. Halse. prosecuting for the Home Office, said that he decided to track the station with a directional finding radio. He first heard the transmissions on Good Friday, the day it was alleged the equipment was alleged the equipment was missions had stopped.

Brig R. C. Halse. prosecuting for the Home Office, said that he decided to track the station with a directional finding radio. He first of the raid he did not arrive at the scene until the middle of the afternoon, when transmissions had stopped.

Brig R. C. Halse. prosecuting for the Home Office, said that he decided to track the station with a directional finding radio. He first of the raid he did not arrive at the scene until the middle of the afternoon, when transmissions had stopped.

Brig R. C. Halse. prosecuting for the Home Office, said that he decided to track the station with a directional finding radio. He first of the track the station with a directional finding radio. He first of the track the station with a directional finding radio. He first of the track the station with a directional finding radio. Easter Monday Post alleged the equipment was missions had stopped. "So often Government the traced the station to the court and was let in.

Collis said that when the court and police arrived there was panic and get rubber stamp convictions, particularly when defendants like these two have the weight of the Government against them."

D-4440 Rheine, Postfach 512

The first test transmission originating from Condor Radio, took place on the 19th October 1975 6225 and 6206.7 kHz with a varying from 70 to 100 watts. cause of heavy interference with an RTTY station Condor has received 22 reception reports, mostly with I: 1 or 2.

The second transmission was aired on the 2nd of November, and now with a power of 200 watts. At 1050 hrs. GMT that day, the station got phone call saying that "6225 kHz is free". So they started broadcasting on this frequency at 1054 hrs. GMT. A few minutes later the phone rang again. This time the station operator was told that someone had started jamming Condor Radio, perhaps a 'legal' station that did not like pirates....

Now the station staff made a big mistake by removing the crystal from the transmitter and running the oscillator as a kind of VFO: This had never been tried before, and caused heavy FM and a continous changing of frequency from about 6229 to 6222 kHz. This took place from to 1120.

The station operator is very sorry for what happened, and is asking the listeners to excause this fault:

At 1120 they once again tuned to 6225 kHz - crystal controlled - for ten minutes. Then they changed the frequency to 6206.7 kHz, where the programme continued until close-down at 1208 hrs. GMT, apart from a short breake from 1157 to 1200, which was caused by an over-heatedresistor, and melting of the solder points. High power = much heat....

Now the station has constructed a separate SUPER-VFO ('SUPER' using the heterodyne principe) fitted with three tubes and controlled, and covers the frequency range from 6180 to 6320 kHz. This one will be used for future transmissions.

Condor Radio has NOT yet printed a QSL card! However, when they have done so, it will be printed on both sides and showing one of the station's transmitters on the front side.

CARULINE DRAMA-NOV. 4. 75

(These stories are 'stolen' from the mag. 'Radio Guide', published by Music Radio Promotions, PO Box 400, Kings Langley, Herts., U.K. Subscription rate: £4.50 (UK: £4) a year.)

Within the space of just one week, the Radio Caroline ship Will Amigo lost its anchor and almost drifted on to the beach three times with also boarded and four people a rested.

For the listeners to the pirate station, the chain of dramatic events began on Saturday, November 8th, when DJ Simon Barrat announced over the air that the radio ship had lost its anchor and was adrift on the High Seas. "We are in no immediate danger," said the Disc Jockey who showed signs of apprehension. Just a couple of hours later the 470 ton vessel hit a sandbank, but luckily the tide was rising, and the Mi Amigo freed itself.

In a Force Six gale, the floating radio station continued broadcasting until at 10.15 pm the engineer, Feter Chicago, announced over the air that they were drifting into territorial waters and would have to cease broadcasts. Throughout the night the stormtrossed boat drifted across the Thames Estuary. Originally, it had been located off—the Essex coast, about twelve miles from the shoreline.

Early on Sunday morning, a small emergency anchor was dropped, and the pirate found itself located in the South Edinburgh channel, 8 miles due North-West from Margate on the North Kent coast.

A couple of days leter an American tug, which had been sent out from Spain, delivered a new anchor to Mi Amigo. The ship was moved further along the Edinburgh channel so that it was due North of Margate. The owners of the boat seemed to be under the impression that they were now in International Waters, so on Thursday, 13th November, transmissions resumed.

But the Poblice and Home Office thought they were inside the limit. On the following day, a police launch left Sheerness in Kent at 1 pm and arrived alongside the Mi Amigo two hours later. A party headed by Detective Sergeant Hargreaves of Essex Police, MM boarded the pirate and ordered the Dutch crew to switch off the transmitter. The Police had search warrants issued under the Marine etc. Broadcasting (Offences) Act 1967, and the Wireless Telegraphy Act 1949. They arrested four people, and certain property as evidence was seized. A Police statement later said that the detainess were "apprehended without reststance or untoward incident".

The four men were then taken back to land, while the Mi Amigo was left under the control of the Dutch crew. No attempt was made to detain the ship. After a night in the cells at Southend Police Station, the four men appeared before Southend Magistrates on Saturday morning. The Captain, Werner de Zwart, 30, of Alicante, Spain, was charged with allowing illegal radio transmissions to take place from his ship. Two disc jockeys, Glen Schiller, 22, of no settled address, and Simon Burnett, 19, of Kingsood Avenue, Bromley, Kent, were accused of participating in illegal broadcasts on the 13th November 1975. The fourth man, Peter Murtha, 27, of Torridge Road, Thornton Heath, Surrey, was charged with reparing such illegal transmitting equipment.

All four were bailed for £1,000 and ordered to surrender their passports. The case was set for Thursday, December 11th, 1975, atSouthend Magistrates Court.

Meanwhile the orippled radio ship was moved further out to sea, but transmissions it recomm . The Hore Officials had removed part of remandith oment

RATIO SHIP TO BE SEIZED

Following the police raid on the 'pop' pirate ship Radio Carolineduring November, four men appeared before Southend Magistrates on the 11 th December. Three of them pleaded guilty and were fined a total of £475. The fourth men pleaded not guilty and his case was adjourned until February. The magistrates also made an order for the 470-ton radio ship, 'Mi Amigo' and its contents to be seized by the police.

The three men charged under various sections of the Marine, etc. Broadcastine (Offences) Act of 1967, were lied jockeys Glan Schiller and Simon Dannett and Captain Werner De Zwart.

For the prosecution, Mr. David Knight explained to the Court that Radio Caroline had been broadcasting from the M.V. Mi Amigo in international waters until the 8th November, when she broke her moorings and drifted across the Thames Estuary. Transmission ceased for several days, but resumed on the 13th November. Accurate bearings were taken and it was found that the vessel was I mile inside the British territorial waters. The following day police boarded the vessel and arrested the deejays and crew.

Each of the defendants said that they all thought they were in international waters and that they would not have broadcast if they had known otherwise.

Glen Schiller, because he was an American, was fined only £50 plus £25 costs. Simon Burnett, who told the Court that he felt that all he had done was make a few people more happy and tolerant of each other, was fined £200 plus £50 costs. The Captain, Werner De Zwart, was fined £100 plus £50 costs. The three defendants paid their fines immediately in cash.

Simon Barratt - or Simon Burnett as his real name is - is now writing on a book about the events of last November on board the M.V. Mi Amigo. The book will be called "Ten Days in the Life of a Lady", and is due to be published in a couple of months.

How to construct a 30 WATT HOVICE TRANSHITTER FOR 48 HETRES.

Part 3 - THE MODULATOR UNIT.

The schematic of the modulator unit suitable for the 30 watt transmitter is given on next page. The part list is given below together with instructions for connexion of the unit to the transmitter. To modulate a 30 W transmitter a power of 15 W is required in anode/screengrid modulation type. modulator shown on next page will suit this purpose well, and should be connected between the points marked X-X in the transmitter-diagramme in Free Radio Supporter nr 3-4, and where there should be no connection. If you already now want to get a more powerful modulator we advice you to only do some changes of output-tubes - f.ex. EL 34 or 616 G. In that case you must note that a bigger "modulation-transformer" nust be used also. As you see in the diagramme on next page a s.c. "PUSH-PULL" construction is used, make it necessary to use a special center-tapped push-pull transformer. The secondary winding should have on impedance of 3000-4500 ohn if it should be directly connected to points X-X in the high-voltage line of the transmitter. If you only will find a P-T transformer with a low secondary impedance of 3-16 ohm you must then make use of an other "loudspeaker-transformer" to get up the impedance to the right (high) value. If not, you may not enought AF-voltage to modulate the transmitter current more than a few percent. The "loudspeaker-transformer" must be "big" enought to "transfer" 15 Vatt power and must of course be connected "reverse" - which means that its low-ohm winding is connected to the secondry winding of the modulator transformer and its "high" winding to the points in transmitter diagramme marked X-X. You must of course make sure which windings you connect ... and with an ohm -meter this is quite simple. If not - you may also look to the "thickness" of the wires coming out from the transformer. The "high-impedance" winding is allways much thinner than the other " low-imp." winding. In that case of luck - when you already have an ordinare "music-amplifier" at home of 15 W output power or more, you may only use a "reverse-coupled" loudspeaker-tran -sformer coupled between this your amplifiers "output-line" (4-8 ohms) the points marked X-X in the high-volltage line of the transmitter. You may note the fact that some transistor-anlifiers are too sensitive to IF from the tx and that some kind off "feed-back" nayoccur if you are unlucky. If a "feed-back" is noted, you may try 10nF condens, between the two lines and earth or to "shield" the amplifier in some way.

PART LIST:

R1 = R3 = 250-500 kChm/log pot. R2 = R4 = 3.3 kOhm 1/4 U R5 = R9 = R10 = R11 = 220 kOhm 1/4 U R6 \$ 47 kOhm 1/4 W R7 = R12 = R14 = 470 kOhm 1/4 U R8 = 1.8 kOhm 1/4 U R13 = 130 Ohm 2-3 U R15 = 27 kOhm 2 U

C1 = C3 = 5 nf C2 = C4 = C8 = 10 uF/6-10 V C5 = 2 nf C6 = C7 = 16 uF/350 V D1.Lyt. C9 = C10 = 33 nF/300 V C11 = 10 uF/25 V V1 = ECC 81 V2 = ECC 83 (ECC E1) V3 = V4 = EL 84 Tm = Hodulation transformer/Pushpull type (see text abouve)

The ECC 81 (V1) amplifies the low signals from a ceramic mic resp. a line from f.ex. a tape-recorder (100-300 nV). As the anodes are connected this tube act also as a mixer-stage. The second tube (V2) amplifies the signales and acts also as a phase-reverse stage for the P-P stage. With 300-325 V from a power suply unit the 2 HL 84:s may produce at least 17 Vatts in the "class AB - coupling". With f.ex. 2 HL 34 a power of 50 V is in your hands - but then you have the trouble to get held of a larger transformer too.

Radio Caroline North, mentioned in last issue, has changed its realistic Radio Mandango. The station is broadcasting between 1000 and 1130 GMT, on 6225 kHz, and can be reached by writing to the following address: Mike Tony, c/o 60 Shady Lane, Great Barr, Birmingham, B44 9HA. The station has also decreased power from 20 watts to 17 watts, according to the station's engineer. The broadcasts are made every second Sunday. Radio Mandango has also been heard testing on 5815 kHz and on 1410 kHz medium wave.

Radio Valleri is back, now operating on 6260 kHz. Its new mailing address is: Box 830, 22 Coldershaw Road, West Ealing, London, W13 9DX.

The address to Radio Atlantis is as follows: P.O.Box 512, D-444 Rheine, West Germany. The station is operating on 6235 kHz with a power of 20 watts.

ABC England operating on 6270 kHz with a power of 8 watts has, according to the operators, been raided. However, the operators manage to get away, and on Boxing day 26th Dec. ABC England will be back on the air from 0900 CMT, with 800 watts. Their address: 42 Arran Close Cambridge, England.

The correct address to Skyport Radio is: 134 Fastworth Road, Chertsey Surrey, England. The address was uncorrectly written in last issue!

According to Mr. Johnny O'Brian, Radio Valentine will buy a 500 watt PA stage soon. More than 200 letters arrived in connection to their transmission on the 5th Oct., so a increase of the power output should not be nessecary....!

Radio Amnesty International is the very first Scandinavian station that has received a reception report from the United Kingdom: The station was logged in Sevenoakes, 20 miles from London, on the 30th November, with SINPO 22222. Our congratulations to R.A.I.:

Radio Black Shadow has been logged in Denmark lately on medium wave approx. 1325 kHz, at cl00 hrs. GWT. The station's address is: Box 77, Raalte, The Netherlands.

Secondhand information tells us that the Dutch MW station Radio Torro Int. never has been a member of the 'VSS' (Victoria Success Stichting) as we wrote in last issue.

Because of the GPO getting too close, Tiger Radio International has changed its transmitting location, and is now even transmitting from another country than originally. In this way they hope that the GPO won't interfere.

Radio Concord is on the air again on 230 metres each and every week-end.

Radio Jackie has plans to reopen their VHF outlet for regular transmissions on one day of the week, 6 or 7 hours.

Radio Revolucion is a new station with the address: 15 Traverse de Pla. Perpignon, France. The station is operating on 6220 kHz.

London Music Radio has lately been heard on 1325 kHz during weekends. The station's address is unknown.

Radic Napoleon Int. has been heard on 26. Nov. on 1322 kHz, announsing the address: Possible 77, Bridge; The Netherlands.

Ful garantee that all the adresses are correct can't be given as free radiostations often changeadresses als to securityreasons: !!!

FIGHT WAS ASSESSED AND THE CONTROL OF THE CONTROL O

Do you have any questions concerning Free Radio or the FRL? Just send them to us, and we will do our best to answer them!

"Why nothing at all about Mi Amigo and Caroline in Free Radio Supporter? I think it would be very nice if you can to report about this matter.

Is the reception of Caroline/Mi Amigo in Norway possible? Perhaps do you have records?"

A. B., France.

Editors note: The FRL is not selling records, except for the jingle records we are offering in this issue.

We are not writing about the pirate ships simply because there are so many other Free Radio mags which are concentrating on these pirates only. Instead we want to tell the DX-ers about the real Free Radio stations - the land pirates. We have made an exception in this issue though, because we found the events in the North Sea of last autumn very interesting, which we hope you will do, too.

The Mi Amigo can be heard loud and clear here in Norway, up to QSA 5

"I would like to comment the writing in the Free Radio Supporter. If possible I would appreciate more info about mediumwave pirates, because this is neglected in 'Supporter': Especially the British stations are broadcasting exellent programmes with good technocal standard.

I would also like to know more about how FRL works and eventual plans for the future.

Otherwise I think that the tips coloumn aught to be brought back and that frequencies should be stated in the QSL coloumn."
R. B., Norway

Editors note: I agree with you when saying that we have been writing too little about the MW pirates, but as a matter of fact we don'tknow very much about these stations ourselves! We have almost no information on them! Anyway, we'll see what we can do about it, ok?

"Thank you for an interesting and good 'Supporter'. It was a nice issue, especially I think that the pictures you printed in offset was very nice and interesting. Lately the standard of 'Supporter' has increased considerably. Thanks for informative articles like "How to build a SW-TX with 30 watts for a novice" and "Letters"-coloumn, as I have suggested.

An other nice new feature, which I like very well, is the new " QSL of the month"-feature. I certainly agree to that the Radio Prito QSL is first-rate in design and standard. I think its silly of you to stop presenting tips on pirates. I think it is interesting to find out how good the different stations are received in different countries, to find out which power a pirate have to use." -219, Norway.

Editors note: I do not think that we will bring back the tips coloumn, at least not for some time. This has different reaons, which we have mentioned in earlier editions of 'Supporter' (and we won't therefore discuss this any more here). In stead we will bring you some reports from DX-ers in different parts of Europe, and in the next issue we hope to be able to present the fist part of 'The Swedish Report'. Later we will present 'The British Report', and perhaps also German Dutch & French reports if we are able to find people who is in the position to write such stories. Therefore I would now like to say hallo to DX-ers in these countries. Is anyone of you interested in writing such stories for us as mentioned above? Let us hear fron you

SHORT- MEDIUMWAVE AND FM TRANSMITTERS NOV AVAILABLE FROM FRI

FRL is now able to help those of you who are interested in buying a transmitter. We can deliver transmitters with power outputs from 2 watts and upwards for FM, and 150 watts and upwards for short and mediumwave, all with 100% modulation capability and up to broadcast specification, i.e. negligable distortion & harmonics. Price and details on requesting, by enclosing 2 IRC's and writing in English to: Free Radio League, Dept. SMT, P.O. Box 46, N-6650 Surnadal, Norway.

Complete your record collection with our Free Radio records (singles) Man of Action (RNI theme) by Les Reed & orch., and Caroline played by Fortunes. £1. - each + postage. Payments to FRL giro a/c please. Reply to: FRR, c/o FCL.

WANTED:

I am looking for all free radio newscuttings (from news papers or magazines, etc), in either English, French, Dutch, or German. I am also interested in exchanging free radio tapes. Please send me your list, and you will receive my list.

John Jarvis, 47 Robin Road, Erdington, Birmingham, B23 6PB, England.

75 and 15 IPS copies of all the R. Atlantis Jingles, and also those from the Mi Amigo Flachback show, also require any free radio books especially the RNI Souvenies books. I have a few recordings, ie early Caroline, final hour V.G. quality of R. City & R. London etc, etc, & would be willing to exchange these for above, or will give good prices. Reply to: FRL, Dept DMT.

Radio Prito, mainly operting on 6275 kHz, has got a new DJ: In 1976 Phill Player will be replacing Wim de Rooy. 2 IRC'S for a QSL reply.

Radio Poseidon (International) has got a new QSL card. This new one is showing a picture of the station's transmitting equipment.

SPECIAL ANNOUNCEMENT FROM RADIO SATURNUS:

We are planning to make new QSL cards, and we would like to have some suggestions from our listeners, or anybody else, what it should look like. So everyone can send us a picture of the new QSL card of Radio Saturnus, drawn on a piece of paper.

Two things must at least be found on the QSL card: there must be written Radio Saturnus and the letters QSL. Otherwise the desing of the QSL is up to you, but here are some suggestions: FRL address, verip fication text, 48 mb, Fight for free radio or anything like that. The size should be 10,5 cm x 15 cm, and only the other side of the card is for pictures and writings.

Your suggestions should be sent before 31st of January -76. The prices are: The winner gets a C-60 cassette recorded with Radio Saturnus programmes, and we will draw lots with everyone who has taken part for three single records.

ABC Europe was raided on Nov. 16. at 1258 hrs. by the Dutch GPO and Police. All studio and transmitting equipment were confiscated, including the 80 watt transmitter.

The Dutch post office senzed ABC Europe after 21 months of successful broadcasting, as Finland and the United Kingdom had telexed Holland several times that ABC Europe was illegally transmitting in the 49 metre band.

During a recent International Telecommunication Conference in Finland ABC Europe was an item on the agenda.

No complaints of interference, however, were received by the Dutch post office and if they had not received these telexes, the station would probably still been on the air!
